

Sound absorption ratings measure the amount of reflected sound absorbed by the window covering. If noise is a concern, choose a window covering that soaks up sound, as indicated by a high sound absorption rating.

\* Sound absorption measures the amount of reflected sound absorbed by the shade.  
The higher the number, the more sound is absorbed.

† This relatively low sound absorption means that the vanes/slats reflect most of the sound;  
thus most exterior noise is reflected back toward the outside when the vanes/slats are closed.

‡ Does not include perforated vanes.

Note: The addition of the PowerRise® or PowerGlide® battery operated remote control system to  
products does not alter the level of sound absorption.

N/A Test results not available at this time.
